

SMARTEPT BY AMETECs · PLAIN-ENGLISH USER MANUAL

SmartEPT — User Manual

A simple, step-by-step guide for the Owner/Admin who sets it up, the Manager who watches their team, and the Employee whose PC runs the agent. No technical knowledge needed.

02 August 2026 · Covers: Web Console + Desktop Agent · Roles: Admin · Manager · Employee

Contents

- 1 · The basics — signing in & finding your way
- 2 · Who can do what (roles)
- 3 · Owner / Admin guide
- 4 · Manager / Team-Leader guide
- 5 · Employee guide — the desktop agent
- 6 · Everyday tasks — quick how-tos
- 7 · If something looks wrong
- 8 · Words explained & who to call

What is SmartEPT? SmartEPT shows you how work time is really spent — it records attendance, active vs idle time, app & website use, breaks, meetings and productivity, then turns it into a live dashboard, simple scores and printable reports. Two pieces: a web console (owners & managers) and a visible desktop agent on each employee PC. It is always visible and consent-based — there is no hidden mode.

1 · The basics — signing in & finding your way

Opening the console

1. Open your web browser (Chrome or Edge) and go to your SmartEPT web address (your admin will give it to you).
2. Type your email and password and click Sign in.
3. The first time, you'll be asked to set a new password. Then you land on your home screen.

[Screenshot]

The SmartEPT sign-in screen

Good to know: Forgot your password? Your admin can reset it in seconds from the Users screen.

Finding your way around

There is a menu on the left and your content on the right. What you see depends on your role — an employee sees only their own information, a manager sees their team, an admin sees everything. Every screen has a small ⓘ Help button that explains it in plain language.

[Screenshot]

The console with the left menu and the ⓘ Help button

2 · Who can do what (roles)

SmartEPT gives each person exactly the access they need — nothing more.

Role	Sees	Typical use
Company / HR Admin	The whole company	Sets everything up, adds people, reads all reports, manages the licence.

Role	Sees	Typical use
Branch Admin	Their branch only	Runs one office/location.
Manager / Team Leader	Their own team only	Watches their people's live status, attendance and productivity.
Auditor / Compliance	Read-only, company-wide	Checks records and exports the audit trail.
Employee	Only their own data	Signs in on the desktop agent; can view their own attendance & report.
Note: The Owner/Admin can fine-tune permissions and create custom roles (Users & Roles screen), so your setup matches how your business is organised.		

3 · Owner / Admin guide

For the Owner / Admin. This section walks through setting up and running SmartEPT, screen by screen, roughly in the order you'd use them.

3.1 · Dashboard — your live board

What it's for: a real-time picture of who is working now — Active, Idle, on a Break, in a Meeting, or Offline — plus day totals and each PC's agent health.

What you can do: click any tile (e.g. "On Break") to see exactly who is in that state; spot a PC whose agent stopped reporting.

[Screenshot]

The live dashboard with status tiles and the team list

Good to know: The dashboard is the single truth — the same numbers appear in the reports, so live and printed figures always agree.

3.2 · Set up your company (Org)

What it's for: describe your business — Branches, Departments, Teams, Designations and Shifts (working hours).

1. Open Org from the menu.
2. Add Branches first, then Departments, then Teams.
3. Add Shifts — start & end time and allowed break minutes. "Late" and "productivity" are measured against this.

[Screenshot]

The Org screen — branches, departments, teams, shifts

Good to know: If you skip the shift start time, "late minutes" cannot be calculated — always give each employee a shift.

3.3 · Add your employees

1. Employees → Add employee; fill in name, email, branch/team/shift.
2. Many people? Use Bulk import to add them all from a spreadsheet.
3. When someone leaves, use Relieve — tracking stops and a tidy archive of their records is kept (downloadable/restorable).

[Screenshot]

The Add-Employee form and the Employees list

3.4 · Choose what is tracked (Policies & Rules)

What it's for: you decide what SmartEPT records and enforces. Separate simple policies for each area:

Policy	Controls
Monitoring	Whether tracking is on, and how sensitive "idle" is.
Screenshots	Whether screenshots are taken, and how often.
Webcam presence	Whether the app checks a person is at their desk (numbers only).
Applications / Websites	Which apps & sites count as productive, and which are blocked.
Breaks / Attendance	Allowed break time; how late and check-out are decided.
USB / Network / VPN	Optional restrictions on removable drives, networks and VPNs.

How assignment works: set a rule for the whole company, or a specific branch, department, team, person or even one PC. The most specific rule wins. Set nothing, and nothing is tracked — SmartEPT is off by default and safe.

[Screenshot]

The Policies screen with the assignment options

Note: Nothing sensitive (screenshots, camera) is ever captured unless you switch that policy on AND the employee has given consent on their agent.

3.5 · Attendance

- Review the day's sheet — a mid-day step out for lunch is never mistaken for going home.
- Correct something with manual adjust (HR regularization) — the change is recorded.
- Add Holidays so they aren't counted as absences.
- Export the attendance register for payroll.

[Screenshot]

The attendance sheet with late / half-day / absent markers

3.6 · Biometric & Gate-to-PC

Gate-to-PC in one line: the employee's PC stays locked for work until they physically punch in at the door. No punch, no working desktop — which stops "buddy punching" and proxy attendance from day one.

1. Biometric → add your device and map each device user to a SmartEPT employee.
2. Turn the Gate On, Off (for a trial), or leave it Auto (follows your device setup).
3. If the door hardware fails, an admin can grant an emergency override — every override is recorded.

[Screenshot]

The Biometric screen and the Gate-to-PC switch

3.7 · Meetings, Reports & Exports

Meetings: schedule meetings, see who joined, and let SmartEPT close them on time automatically.

Reports: Productivity (a clear 0-100 score), Compliance, Breaks, Monthly summary and a per-employee timeline. Every report exports to a spreadsheet for payroll or records.

[Screenshot]

A productivity report with scores and the Export button

Good to know: A "transparent" productivity report shows exactly how each score was calculated — useful when discussing performance.

3.8 · Screenshots, Webcam & Violations (evidence)

When your policies allow it, review captured screenshots, webcam-presence records and a feed of violations (e.g. a blocked app opened). Each violation shows only its own evidence — no sifting through unrelated pictures.

[Screenshot]

The Violations feed with the per-event evidence view

3.9 · Users, Roles & Licence

Users & Roles: add manager/admin logins and tick exactly what each role can do. **Licence:** install or check your SmartEPT licence key (or import your offline licence file for on-premises).

[Screenshot]

The Roles permission matrix and the Licence screen

3.10 · Settings & Ops (housekeeping)

Company email (SMTP) with a Send test email button, your business WhatsApp number, storage & retention, nightly backups, and Help → Troubleshooting (a live self-check that turns red if something needs attention).

[Screenshot]

Settings with the email test button and the Troubleshooting self-check

Note: You configure everything here in the screen — you never need to touch code or files.

4 · Manager / Team-Leader guide

For the Manager / Team Leader. You see your own team only — SmartEPT limits you to the people who report to you (and the teams under your team leads).

4.1 · Your live dashboard

See, right now, who on your team is Active, Idle, on a Break or in a Meeting. Click a tile for the filtered list.

[Screenshot]

A manager's team dashboard

4.2 · Attendance & productivity for your team

- Attendance — who came in, late minutes, breaks.
- Productivity report — each person's score; open the transparent view to see how it was built.
- Timelines — a minute-by-minute picture of one person's day.
- Breaks review — approve or note breaks that ran long.
- Exports — download your team's numbers to a spreadsheet.

[Screenshot]

A team productivity report

4.3 · Meetings

Schedule a meeting, share it, and see who joined. With the right permission you can end a meeting for everyone.

Good to know: If a menu item or button is missing, your role simply doesn't have that permission — ask your admin if you need it.

5 · Employee guide — the desktop agent

For the Employee. The agent is a small app on your work PC. It is always visible, and only records what your company's policy allows, after you agree.

5.1 · Installing & first sign-in

1. Run the installer your admin gives you (Windows, Mac or Linux) and open SmartEPT Agent.
2. Sign in with your work email and password. The window registers your PC as your device.
3. Read the consent screen — it says plainly what will and won't be recorded — and accept. Tracking will not start until you do.

[Screenshot]

The agent sign-in and consent screens

Your privacy: There is no hidden mode. The webcam feature (if used) reports only simple numbers like "someone is at the desk" and a brightness reading — no photo or video is recorded or sent unless a photo policy is explicitly turned on. Screenshots are only taken if your company's policy enables them.

5.2 • The gate wall (if your office uses Gate-to-PC)

The agent shows a friendly lock screen until you punch in at the door. Once your punch reaches SmartEPT (within a few minutes), your PC unlocks. Punch out mid-day and the PC gently locks with a break started automatically until you punch back in.

[Screenshot]

The agent gate / lock screen asking for a door punch

5.3 • Breaks & meetings

Use the agent buttons to start a Tea, Lunch or Other break, or to mark a Meeting. You can only be in one at a time — end your current break before starting another (the app guides you).

[Screenshot]

The agent break / meeting buttons and live status

5.4 • Working offline

No internet for a while? The agent keeps working and saves everything locally, then sends it automatically when the connection returns. A small counter shows how much is waiting — you don't need to do anything.

5.5 • Your self-service portal

You can sign in to the web console too, where you see only your own information — your attendance, productivity and breaks — and you can export your own report. You cannot see anyone else's data.

[Screenshot]

The employee self-service view

6 • Everyday tasks — quick how-tos

I want to...	Do this	Who
Change my password	Sign in → profile → change password (or ask admin to reset).	Anyone
Add a new employee	Employees → Add employee (or Bulk import for many).	Admin
Fix a wrong attendance entry	Attendance → open the day → manual adjust.	Admin
See who's on a break now	Dashboard → click the "On Break" tile.	Admin / Manager
Run a monthly productivity report	Reports → Productivity → pick the month → Export.	Admin / Manager
Start my lunch break	Agent → Lunch button.	Employee
Turn Gate-to-PC on/off	Biometric → Gate switch.	Admin
Check the system is healthy	Help → Troubleshooting (green = all good).	Admin

7 · If something looks wrong

A PC's agent stopped reporting. Check the device is on and online; the Dashboard device-health and Help → Troubleshooting point to the cause.

Times or nightly reports look stale. Usually the server's background scheduler isn't running — the Troubleshooting "Background scheduler" tile turns red. Share that with your admin/IT.

Someone can't see a screen or button. Their role lacks that permission — an admin can grant it in Users & Roles.

Late minutes are blank. The employee has no shift start time — set a shift in Org.

Note: Every SmartEPT product has an in-app Help → Troubleshooting page in plain language, so most questions are answered on the spot.

8 · Words explained & who to call

Word	Plain meaning
Agent	The small visible app on each employee's PC that does the recording.
Console	The website where owners and managers work.
Policy	A rule that says what is tracked or blocked.
Gate-to-PC	The PC only works after the employee punches in at the door.
Active / Idle	Whether the person is using the PC or it's been untouched for a while.
Productivity score	A 0–100 figure for how much of the working window was productive.
Consent	The employee's agreement, given in the agent, before tracking starts.
Licence	Your paid right to use SmartEPT (cloud subscription or one-time perpetual).
